Tests were performed on electrolyte content (sodium, potassium, calcium, magnesium, chloride), sugars, and heavy metal contamination (arsenic, cadmium, lead, mercury). Overview of Electrolytes - Learn about the causes, symptoms, diagnosis & treatment from the MSD Manuals - Medical Consumer Version. You can become depleted of electrolytes with heavy perspiration, loss of fluid due to diarrhea or vomiting and excessive consumption of water that doesn't contain these elements. Your body maintains its fluid balance through the action of substances called electrolytes, which are mineral compounds that, when dissolved in water, become electrically charged particles called ions. Low potassium, or hypokalemia, can cause increased blood sugar, fatigue, confusion and muscle weakness and cramps according to the Merck Manual of Health and Aging. As for the first part of your question, Wikipedia provides answers

The most familiar electrolyte is the one found on every dinner table. Quora User, been playing with carbon fiber for >25 years. The truth is, you should be just as concerned about replenishing them as you are with replacing lost fluid. The Merck Manual of Medical Information - Second Home Edition [On-line information]

This difference in the distribution of electrolytes (and thus electric charges). Some conditions such as heart disease and diabetes may also affect the fluid and electrolytes balance in the body and cause abnormal levels of electrolytes. (1995-2004). Electrolytes vs Nonelectrolytes All the compounds can be categorized into two groups, as electrolytes and non-electrolytes based on their ability to produce ions and therefore, able to. Electrolytes are important in Electrolysis of Water. Electrolytes dissolve in water or some other solvent and form ions if you ask a chemistry professor to define "electrolyte," they might say that an electrolyte is a compound which produces ions when dissolved in a solution such as water.
